

System and Method for Constructing Large-scaled Drawings of Similar Objects

Abstract of the Disclosure

This invention provides a system and method for constructing pictures, particularly to one capable of drawing large-scaled drawings of similar objects through the analog rule and iterative duplication, such that an end-user is able to create and design various fractals or other complicated pictures containing large-scaled drawings of similar objects based on simple designs of patterns and targeted line segments as well adjustment of baselines. This invention may be adopted in the fields of artistic designs, drafting and instructions due to the simple operations as involved.
